AQUILAFIT

Who Are We?

AquilaFit is an interactive workout guidance system for gyms and fitness clubs. It combines various technologies along with cloud computing in an innovative and intuitive package designed to optimize users' training experience.

This system can take you right to the technology that until now was practically available to all other industries but not yours. The system is easy to navigate and offers instant access to valuable statistical information that can allow you to make better informed decisions to improve efficiency and ultimately a bottom line of your organizations.

AquilaFit offers a smarter and more informed decision making in running your organization.

AQUILAFIT

Solution for a manger/owner

    Having a very comprehensive statistical information showing usage of your gym's equipment can be very helpful in improving cost effectiveness of your institution. At this day and age you could benefit tremendously from having this valuable information and be able to understand how your equipment is utilized.

    However, there is no really easy way of getting or compiling necessary information. Current gym equipment producers do not provide any way to allow you to effortlessly gather this valuable data and there is no aftermarket equipment that would help you with this daunting task.

AQUILAFIT

This is where AquilaFit comes in. We can blanket your whole fitness area with proprietary units that would allow your gym-goers to log their exercises. This would have a huge benefit for you because you are allowed to compile some of this information for your benefit.

You can access graphs that would very quickly show you what equipment would benefit from adding another set, and what equipment is overlooked by your customers. This overlooked equipment takes up your valuable real estate which could, with given information, be much better utilized.

AquilaFit can help you boost operational efficiency and gain a competitive marketing advantage.
